Text by Anastasia Vygon

## THE RYUTA KAWASHIMA LABORATORY PROJECT

The workbook series Tensai is based on the methodology developed by the outstanding Japanese neuroscientist and neuropsychologist **professor Ryuta Kawashima at Tohoku University**. It turns out that our brain can be trained to sustain active memory, develop its potential and prevent the onset of dementia not only in adulthood. It has been research proven that regular studies with children from age 2 to 12, when the intense development of the human brain typically occurs, can lead to astonishing results. Tensai, which translates from Japanese as gifted, smart and genius, is a methodology that aims at integrated development of thinking, logic, memory, attention and observational skills. Simple games and fun tasks will stimulate both the right and left cerebral hemispheres, increase intellect and mental capabilities of your child.

Together they will go to **the valley of geysers and volcanoes**, and learn what the Earth and eggs have in common, **how mountains are formed**, how **magma differs from lava**, and much more. At the end of the book there is a QR code leading to the website with a video about **simple experiments**.

Illustrations by Nadezhda Sushintseva

Text by Marina Doroshchenkova

- Друзья, мы должны вернуться обратно, — принял решение Боря.  
Возвращаться никому не хотелось. Тим даже рассердился на Нору. Вот неженка!  
Ничего ещё не случилось, а она уже устроила потоп. Зачем тогда напросилась в экспедицию?  
Ёжик догадался, о чём думает Тим.
- Мы — команда, а значит, должны заботиться друг о друге! — серьёзно сказал Боря.  
Все грустно вздохнули. Но тут к Норе подошла лиса Лира.
- Мы, конечно, вернёмся, если ты хочешь. Но надо научиться побеждать свой страх.  
Давай попробуем справиться с ним вместе?
- Белочка всхлипнула. Она прижалась к лисе, словно была маленьким лисёнком.
- Хорошо, я останусь, — прошептала она. — Ненадолго.
- Молодец! — похвалила её Лира. — Держись рядом со мной.
- Друзья бросились обнимать белочку. А Тим сорвал и подарил ей цветок.
- Тогда вперёд, у нас мало времени! — поторопил свою команду Боря  
и первым пошёл дальше. Остальные устремились за ним.

### FUN SCIENCE

80 pages Hardcover

19,5 x 29 cm

ISBN 978-5-00116-476-0

**Children ask adults** many questions. Why can't we stop time? Where does laughter come from? How do whales talk? **Scientists from the country's leading universities** and research centers answered these and other questions in a simple and understandable way. Schemes, characters and explanatory pictures were drawn by the famous Russian comic artist, which is why there is so much **humor** in them.

## КАК ВСЁ ВЫГЛЯДИТ ДО БОЛЬШОГО

Заглянем в прошлое?

Если ты хочешь узнать, что было до какого-то обычного взрыва, нужно увидеть этот предмет (например, хлопушку) или сфотографировать его. С точки зрения физика это означает, что ты нужно поймать глазом или фотоаппаратом излученный объектом в твою сторону свет до взрыва. Этот свет перемещается в пространстве от объекта в фотоаппарат. Причём это происходит не мгновенно, а занимает время!

# ЕЛО ОГО ВЗРЫВА?

тебе  
пу-  
рива.  
ьекта

ть, что было до какого-то мгновения,  
уются переносчик информации (свет),  
во (по которому свет движется) и вре-  
е течёт, когда свет движется, и если  
то замрёт и свет). А теперь вспом-  
гношение Большого взрыва свет, про-  
и время только появились, их не было  
мента. А значит, к сожалению, нет  
глянуть в момент до Большого взрыва.  
не было ни нашего пространства,  
времени, ни нашей Вселенной.

# ПОЧЕМУ В КОСМОСЕ НЕВЕСОМОСТЬ?

Когда ты прыгаешь с забора на зем-  
лю, ты пребываешь в невесомости,  
то есть у тебя нет веса, и ты ни на что  
не давишь. То же самое и в космосе:  
**планеты всё время падают!**

**Поможет реактивный ранец.** Представь, что ты не просто прыгаешь с забора,  
а у тебя есть реактивный ранец, который толкает тебя вперёд. Если этот ранец  
будет достаточно быстро тебя толкать, ты никогда не приземлишься, а будешь  
вечно падать, потому что Земля в прямом смысле уходит из-под ног из-за своей  
круглой формы. То же самое получается с космической станцией. Она летит так  
быстро, что постоянно промахивается и не встречается с Землёй.
